

Instagram GPT – That Writes Hooks That Actually Hit

Stop Guessing What Works

Most creators post and pray. Test hooks by feel. Wonder why some videos explode and others die at 200 views.

The pattern isn't random. It's structure.

What This GPT Does

Takes your idea. Gives you 10 hooks that follow proven frameworks. No generic "5 tips for..." garbage. Real patterns from viral content, adapted to your voice.

Built-in frameworks:

- Hero's Journey (for transformation content)
- The Breakthrough (for aha moments)
- Challenge to Victory (for results)
- Common Mistake (for education)
- Authority plays (when you have proof)

Each with templates. Each tested at scale.

The Hook Game

First 3 seconds determine everything. Not your opinion. The data.

Hooks that convert:

- Pattern interrupts ("I spent \$10K to learn this")
- Specific numbers ("137 days of testing")
- Contradictions ("Do less to earn more")
- Transformations ("Broke to 10K in 30 days")
- Mistakes ("Stop doing X immediately")

The GPT knows which structure fits your content type. Educational? Story? Product? Different game, different rules.

Content Types That Scale

Educational content: Step-by-step systems, myth busting, common mistakes **Story content:** Personal journey, client wins, behind-the-scenes **Authority content:** Social proof, case studies, results **Reaction content:** Viral video breakdowns, trend analysis

Pick one. Master it. Then expand.

The Daily AI Tip Feature

Ask for daily tips. Get specific tactics like:

- When to post (it's not when you think)
- Caption structures that convert
- Hashtag strategies that actually work
- Story-to-feed conversion tactics

Based on analysis of 1000s of viral videos. Not theory. Patterns.

How to Use It

1. Start with your idea
2. Ask for hooks in your content type
3. Test all 10 (seriously, test them all)
4. Track first-hour performance
5. Double down on winners

The GPT remembers your niche. Learns your voice. Gets better over time.

Why Structure Beats Creativity

Creativity without structure = random results. Structure without creativity = boring content. Structure + creativity = predictable virality.

The GPT handles structure. You handle personality.

Quick Wins

Try this today: "Give me 10 hooks for [your topic] using the breakthrough framework"

Then this: "What are the 7 essential parts of a viral video in my niche?"

Then this: "Give me a daily tip for growing on Instagram"

Watch what happens when you stop guessing.

The Bottom Line

This isn't another AI tool. It's pattern recognition at scale.

Every hook. Every structure. Every tip. Based on what actually works, not what should work.

Free to try. Built to scale.
